## Human in 2040 our near future

implanted digital memory hearing with electronic control switch on/off, control volume record pictures, movies, music and retrieve documents and filter at will iet pack redy to fly camera enhanced vision anytime zoom in and out, magnify, take pictures and movies at will wireless connection you are online anytime, anywhere electronic identification tag your permanent ID and personal record exoskeleton other electronic sensors motorized physical power health monitoring,

**DIGITAL ENHANCEMENTS** 

Human in 2040

that humans are going to have will eventually TRANSFORM them into **R O B O T S** 

21<sup>st</sup> century is completely different than the past as humans are massively connected with each other, and can communicate and collaborate at incredible speed. It is triggering the development of technology at such a pace **that the world is going to be a completely different place by the time the school going kids of today grow up**. So they will have to face the world full of new challenges, for which they are going to need different kind of knowledge and skill sets than we deem necessary today.

Recall that it is not just the film based analog camera that has disappeared, digital floppy disks that have reincarnated so many times have already disappeared too. Similarly, **paper based book, driving a car, queuing in front of the doctor's clinic for a health checkup, and even using a desktop computers are soon going to be the thing of the past.** So much so, we are going to enhance our own selves with technology too. Today, we put our credit card and mobile phone in the pocket, but do not consider these as the extended parts of our own self yet. But what about shoes, clothes and specs? Just that way, technology is going to become the extended part of our personal self in the near future – probably in our own life time if we happen to live longer.
